PREFACE

At present the Quarterly Cumulative Index Medicus is published in two volumes a year, each covering books and periodicals received during a six months' period.

The Index is divided into two sections, one devoted to books and the other to periodical literature. The former contains a list of current publications alphabetized as to authors, followed by a subject classification of the same material.

Both sections give complete bibliographic information under the author entry only, with the exception of items which are listed without an author. In such cases the complete title appears in the original language (if English, French, German, Spanish, Italian or Portuguese) and form under each subject entry. The following symbols indicating foreign languages appear at the end of the subject entries and of any author entries with titles translated into English:

Da--Danish	N --Norwegian
Du--Dutch	P --Portuguese
F --French	R --Russian
G --German	S --Spanish
I --Italian	Sw --Swedish

The periodical index is arranged with the author and subject entries in one alphabet. Following is a typical author entry:

ANDRINI, F., and VISALLI, A., Sul trattamento della colite ulcerosa con ACTH e cortisone, Riforma med. **68:**957-960, Aug. 28, '54

The citation gives the names of the authors, the title of the article in the original language if English, French, German, Spanish, Italian or Portuguese; in translation if in other languages. Then follow the abbreviation of the title of the periodical, the volume, paging, month (day of month if a semimonthly, semiweekly or weekly publication) and year, in order named, e.g., Riforma med. **68:** 957-960, Aug. 28, '54

When there are two or more authors for an article, the complete entry as shown appears only under the name of the first author. Under the name of each joint author listed, a cross reference is made to the original author entry, thus:

VISALLI, A.: See ANDRINI, F., jt. auth.

All subject entries are in English. The original title is often inverted or shortened to emphazise significant points, or it may be expanded to indicate more clearly the actual content of the article. The author entry cited above appears as follows under the subject heading:

COLITIS
ulcerative, adrenocorticotropic hormone and cortisone (adrenocortical preparation) in therapy, [F. Andrini & A. Visalli] Riforma med. **68:** 957-960, Aug. 28, '54 I

Articles with titles identical with the subject heading appear immediately beneath that heading with the name of the author only; then unclassified titles in alphabetical order precede the articles grouped under subclassifications. Standard subheadings are as follows:

for diseases:

blood in	experimental	mortality
complications and sequels	heredity	pathology
diagnosis	history	prevention
epidemiology and statistics	immunity	prognosis
etiology and pathogenesis	in infants and children	therapy
	metabolism in	transmission

for organs, regions and anatomic structures:

abnormalities	echinococcosis	physiology
abscess	embryology	roentgenography
absence	examination	rupture
anatomy and histology	foreign bodies	surgery
blood supply	gangrene	syphilis
calculi	hemorrhage	tuberculosis
cancer	infarction	tumors
cysts	innervation	ulcers
diseases	pathology	varix
diverticula	perforation	wounds and injuries

for drugs and other chemicals:

administration and dosage	effects	standardization
determination	metabolism	therapy
	preparation	toxicity

Chemical compounds with prefixes denoting numbers of atoms or radicals, or their positions, such as mono, di, tri, ortho, meta and para, are alphabetized under the essential constituents, the prefixes being ignored as far as alphabetical arrangement is concerned. For instance, p-aminobenzenesulfonamide appears in the Index under "A" as p-**AMINOBENZENESULFONAMIDE,** and dihydroxyphenylalanine under "H" as di**HYDROXYPHENYLALANINE.** Likewise, figures representing the position of radicals or side chains are ignored in the alphabetical classification. Exceptions to this rule include trade names and names used in authoritative drug compendiums as, **ACID, trichloroacetic; TETRACHLOROETHYLENE.**

Articles on the action of a drug in general or the method of administering it are indexed under the name of the drug, but articles on the preventive or therapeutic action of a drug in a particular disease are indexed under the disease; e.g., an article on the pharmacology of quinine is indexed under **QUININE,** while an article on quinine therapy of malaria is indexed under **MALARIA, therapy** with a cross reference from **QUININE, therapy.**

As a rule, the literature is classified as specifically as possible. For instance, articles referable to organs of the body will be found under the particular organ or region **(BRAIN, abscess; FEMUR, fractures; ABDOMEN, tumors)** rather than under the headings: **ABSCESS; FRACTURES; TUMORS.** However, some subjects are of necessity grouped under broad general headings. A representative list follows:

Acid	Medicine	Reflex
Anesthesia	Muscles	Sarcoma
Arteries	Nerves	Sulfonamides
Bacteria	Obituaries	Tumors
Fistula	Paralysis	

Numerous cross references are supplied to guide the user in searching for specific structures, eponyms, tests, drugs, etc.
